1. Target

This document is intended for consumer of the U-Weather application who install and use the application features of their Android phone or tablet.

From the perspective of end-users, the scope of this document includes:

- What app does?
- “Getting started” information

2. Introduction

2.1 About U-Weather App

U-Weather is free weather app that provides current weather details and 5days forecast about main cities around New Zealand. This app also identifies your current geographical location and provides current location's weather information.

2.2 Which devices does the app support

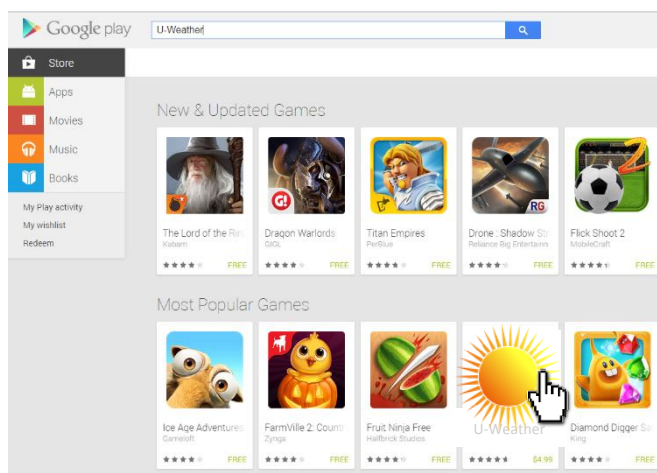

You can install U-Weather app on any mobile device (mobile phone and tablet) which has Android operating system.

2.3 How to install

You can find U-weather app on Google Play (App will available on Google Play to download by end of November 2014)

To find and install

1. On your Android mobile or tablet, open Google Play.
2. Search U-Weather.
3. Select U-Weather in search results.
4. Follow the standard installation procedure.

3. User Interface

3.1 Start-Up

When you open the app, the first screen will appear like this with animations.

3.2 App overview

After U-Weather is finished loading, it will display weather details and 5 days forecast of your current location. This interface contains 2 buttons: **Add** and **Settings**.

Black coloured symbol on the left side of the location name indicates your current location.

Add

You can add the new city by clicking add button.

Settings

Added cities can be deleted form clicking settings button. And also it allows you to turn off your geo location.

4. How to

4.1 Add a new city.

New cities can be added to your display. When you add the new cities, you can see other cities by scrolling or sliding your display. This app only allow you to add New Zealand cities.

To add new city

1. Tap the Add button. 
2. On the Search box, type the city name you need to add.
3. Select the city form drop down menu.

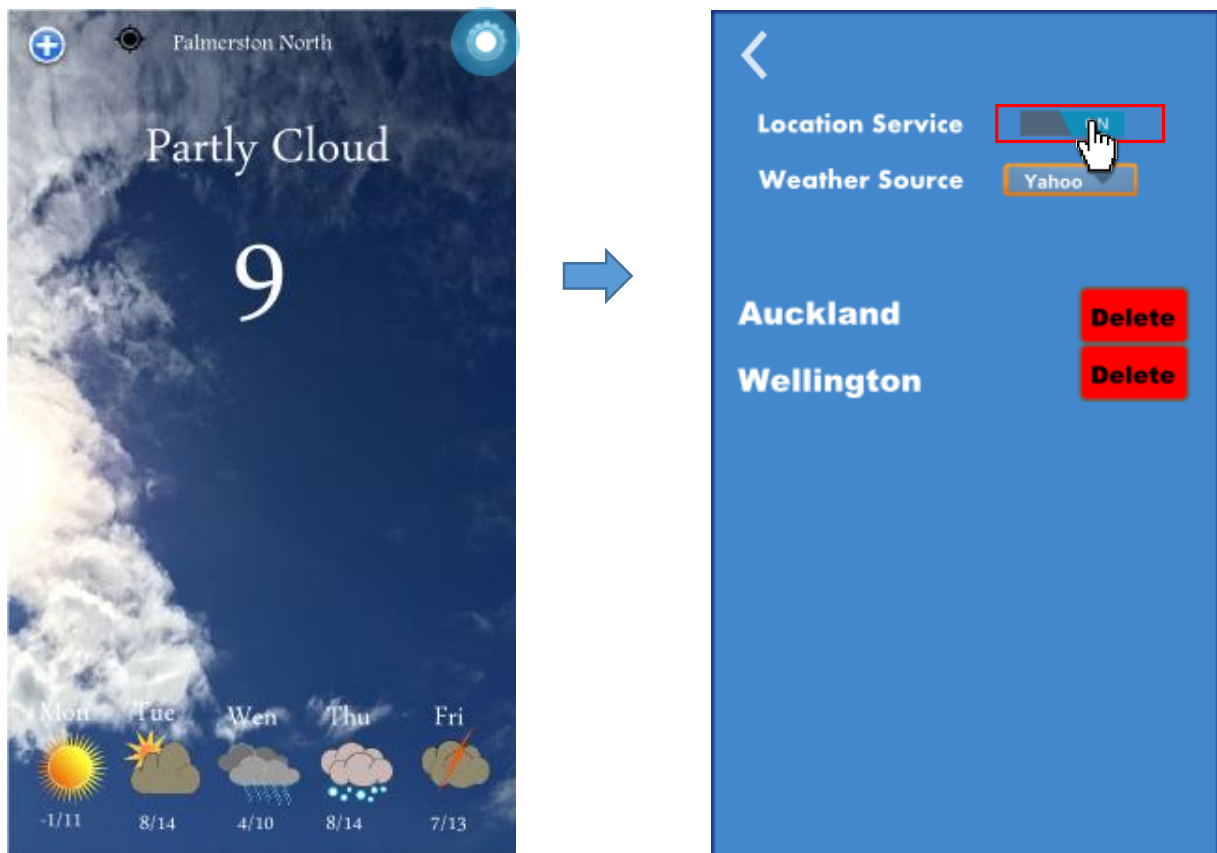

4.2 Turn of location service

Location service can be turned off. If you turn off the location service, app will not display your current location on your sliding screen.

To turn off location service

1. Tap the Setting button. 
2. Set the location service button off. 

Weather Source

U-Weather app has two weather information providers which are Yahoo and OpenWeather. And also app allows you to choose either of them. You can follow the same procedure as above and select weather source from drop down menu.

4.3 Delete city

U-Weather app allows you to delete cities that you have already added.

To delete city

1. Tap the Setting button. 
2. Click delete button by the city name that you don't need any more.
3. Tap the back button to go back to the main screen.
